

RemoteBackupService

Remote Backup Service

The management and protection of business data is more critical than ever. Concerns about compliance and business risk have underscored the need for effective data backup processes. Data loss can literally ruin a business.

Traditional tape backup processes are quickly becoming outdated. The process of managing tapes can be cumbersome and is not always secure or dependable. A truly effective backup solution should be automated, secure and painless.

Remote Backup Service from Harland Technology Services provides all of the benefits you need from a backup solution. Your business-critical data is encrypted, compressed and transported to a secure, SAS-70 certified facility via a data connection. Safe and offsite, the encrypted data is available online at all times for immediate, user-initiated recovery. Encryption keys can be managed to ensure compliance. Harland Technology Services' technical personnel ensure proper setup, monitor the process and are there to help when support is needed.

Features and Benefits:

- **Multi-platform support**
Windows, AIX, HP-UX, Linux, Solaris
- **Easy startup**
Harland Technology Services handles installation and setup of software agents
- **Automated operation**
Once setup is complete, backups occur unattended
- **Strong data encryption**
Client manages encryption keys to ensure compliance
- **Immediate off site storage**
Data is transported over a secure data connection – no tapes to manage
- **Strong security**
Encrypted data resides in secure data centers
- **Data availability**
Data can be restored via a secure portal
- **Fully supported**
Harland Technology Services personnel set up, monitor and manage the process

With no up front capital investment in new hardware, a migration from the daily pain of tape backup technology to the ease and security of Remote Backup Service can happen quickly. Contact your Harland Technology Services Sales Representative for more information.
