

Cloud Recovery Service

Cloud Recovery Service

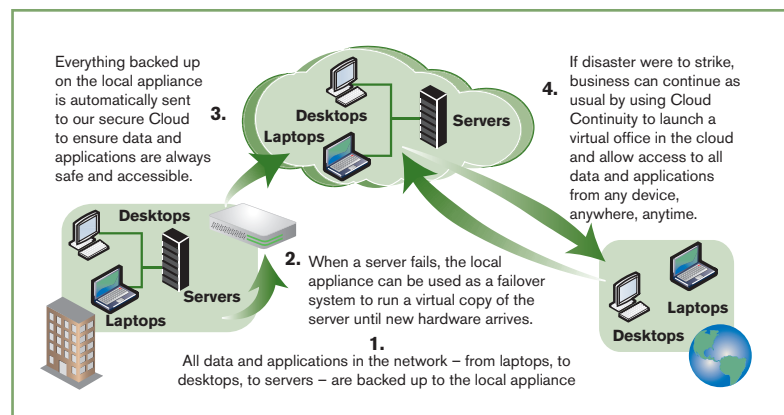

It's probably your reality – you're under-resourced, under-staffed and, ultimately, under pressure to keep things up and running while helping your organization achieve new business objectives. The backup processes that are currently in place are cumbersome and unreliable.

What if we could help you get time back and relieve the strain on your resources without exposing your organization to downtime or data loss?

Our comprehensive Cloud Recovery Service does just that. We can help you free up time and resources and you can rest assured that your data is secure. We provide your organization with a local storage server, virtual server fail-over capabilities, and offsite storage of your images and data to a secure data center.

With our Cloud Recovery Service you are protected in three ways: First, there is a device that stays in your building for fast backup and restores. Second, a copy of your data and server images are stored at a secure, SSAE 16 data center – sent on a schedule that is predetermined and set. Third, Harland Technology Services will handle the implementation, management and administration of your entire backup and recovery processes.

***Harland Technology Services
can help you free up time and
resources and you can rest
assured that your data is secure.***

Benefits:

- Local file and folder recoverability
- Superior security and efficiency via automated, encrypted data handling
- Helps achieve compliance with business continuity requirements
- Fast recoverability of critical devices
