Managed Firewall Service

Firewalls should always be the first line of defense in protecting your network from malicious threats. However, managing firewalls can be challenging, time-consuming, and expensive. SilverSky can help.
About SilverSky

SilverSky is the expert cloud provider of information security solutions. We deliver the industry's only advanced Security-as-a-Service platform that's simple to deploy and transformational to use. For years, SilverSky has been recognized as a leading managed service provider of business email and network security services. We have hosted, secured and monitored the information assets of thousands of large enterprises and regulated businesses utilizing our proprietary security software. By tirelessly safeguarding our customers' most important information, we enable growth-minded leaders to pursue their business ambitions without security worry.

Leverage Our Expertise

SilverSky's Managed Firewall Service significantly reduces the costs and complexity of firewall management. Our team of security experts handles tedious updates, configurations, and patches, saving you time and money. We also monitor your network 24x7, eliminating the need to staff an internal security team around the clock. Our advanced reporting provides real-time insight into firewall activity and our unparalleled compliance expertise reduces the costs and headaches associated with meeting regulatory compliance. As a result, SilverSky's solution empowers your team to focus on core business activities without security worry.

Real-time Insight via the SilverSky Management Console

Let SilverSky be an Extension of Your Team

SilverSky's Managed Firewall Service not only reduces costs and complexity, it also reduces risk. Our expert team monitors your firewall 24x7 and immediately responds to any security issues. Because our team utilizes Security Information and Event Management (SIEM) technology and advanced detection techniques, we can prevent sophisticated threats that are difficult for in-house teams to detect. Also, because SilverSky correlates all security events across our massive customer base, we can identify and respond to emerging threats more quickly.

The Trusted Security Experts

435 million
+ Security events that we review for customers each day

50 million
+ Emails filtered and cleansed every day

$525 billion
+ Value of financial customers' assets that we protect

6,000+
+ Secure and happy customers

SilverSky Reporting

Solution	Description
Reduce costs and complexity	Our security experts monitor your firewalls 24x7 and handle time-consuming updates and patches. This enables you to reduce costs and complexity and empowers your team to focus on core business activities.
Reduce the compliance burden	• Our unparalleled compliance expertise reduces the costs and complexity of meeting compliance and helps you avoid fines. • Our audit-ready reports reduce the costs and headaches of preparing for compliance audits. • SilverSky is under direct FFIEC (Federal Financial Institutions Examination Council) oversight – you'll benefit from using a provider that is held to the same stringent compliance requirements as banks and other financial institutions.
Improve network security	• Our security experts monitor your network 24x7 and respond immediately to any security issues • Our team utilizes Security Information and Event Management (SIEM) Intelligence and advanced detection techniques to prevent attacks that are difficult for in-house security teams to detect. • As new threats are identified, our team implements customized SIEM rules to prevent these threats in the future (often days before security device vendors can add this capability). • We correlate security events across our entire customer base, which enables us to react to emerging threats more quickly than in-house teams.
Improve visibility and insight	Our advanced reporting provides real-time insight into firewall activity and helps managers make better, more informed decisions. SilverSky reporting includes: • Summaries of all firewall activity. • Ability to review events on an IP address-level basis, review connections by direction, review port usage, review byte volume by direction and IP address. • Records of all configuration changes. • Customizable alerts notify administrators when traffic thresholds are met.
